## 2 Introduction

### 2.1 Business Requirements Overview

The NCBA Security and Investigations Department (SID) require an automated application that will assist to manage visitor records to its premises. This will replace the current process that requires team leads to manage physical paper records of these data; this is error prone, susceptible to data loss and/or corruption and makes tracking of these records tedious.

NCBA will make use of Microsoft's Power Platform and Microsoft 365 licenses to implement powerful business process automation to increase its efficiencies, reduce costs and vastly improve its employee experience. Microsoft's Power Platform integrates natively to MS SharePoint and allows organisations to build powerful automated workflows by creating sophisticated processes, leverage digital forms, generate documents, create approval tasks, and more — all within the familiar Microsoft 365 / SharePoint environment.

### 2.2 Key Business objectives

The key business objectives of the Visitor Management application project are as outlined below:

1. Book Upcoming Visits
2. Recording of visits to premises
3. Enable tracking of upcoming visits
4. Enable tracking of past visits
5. Eliminate need of managing visitor data in books
6. Centralize management of visitors
7. Enable easy reporting and analysis of visits

### 2.3 Project Scope

#### 2.3.1 In scope

The visitor management application project scope will entail:

1. Entry / Booking of Visits
2. Cancellation of Booked Visits
3. Amendment of Booked Visits
4. Tracking of Booked / Upcoming Visits
5. Tracking of Past Visits
6. Reporting

### 2.3.2 Out of Scope

The Visitor Management Application project scope will **NOT** entail

1. Visits outside the NCBA locations on the app
2. Branch Visits by customers

## 3 **Business Environment**

### 3.1 **Current Business Description**

The current process of visitor management is manually done using books with no standard application that aggregates data.

### 3.2 **Business Requirements Summary**

The proposed solution seeks to automate the end to end management of Visitor records process through several steps.

### 3.3 **Business Rules**

The Visitor Management app business rules will be as follows:

1. Staff to book visitors on the system
2. Security Staff to review upcoming visitors and Past visitors
3. Staff to cancel visits on the system
4. Staff to amend visits on the system

## 4 **Assumption, Dependencies, & Risks**

### 4.1 **Assumptions**

The Visitor Management application project has the following assumptions:

1. Visitor Management will still be done using the powerapp with data saved to SharePoint.
2. Active directory for NCBA has been properly set up to extract user/staff details
3. NCBA mail server will allow communication from the application

### 4.2 **Dependencies**

The Visitor Management application project has the following dependencies:

1. Microsoft SharePoint – for data storage.
2. Microsoft Active Directory – for single sign on and extraction of user's data and sending email notifications.
3. Microsoft Office 365 – To host the Visitor Management power platform application

### 4.3 **Risks**

The foreseen risks of the project and their respective include:

1. Scope creep – clear definition of project scope and out of scope.
2. Low performance – optimization of the environment where the app will be hosted.
3. Time crunch – Set timelines for completion of the project.
4. Stretched resources – have a dedicated developer for the project.
5. Lack of clarity – Clearly define project requirements and objectives.

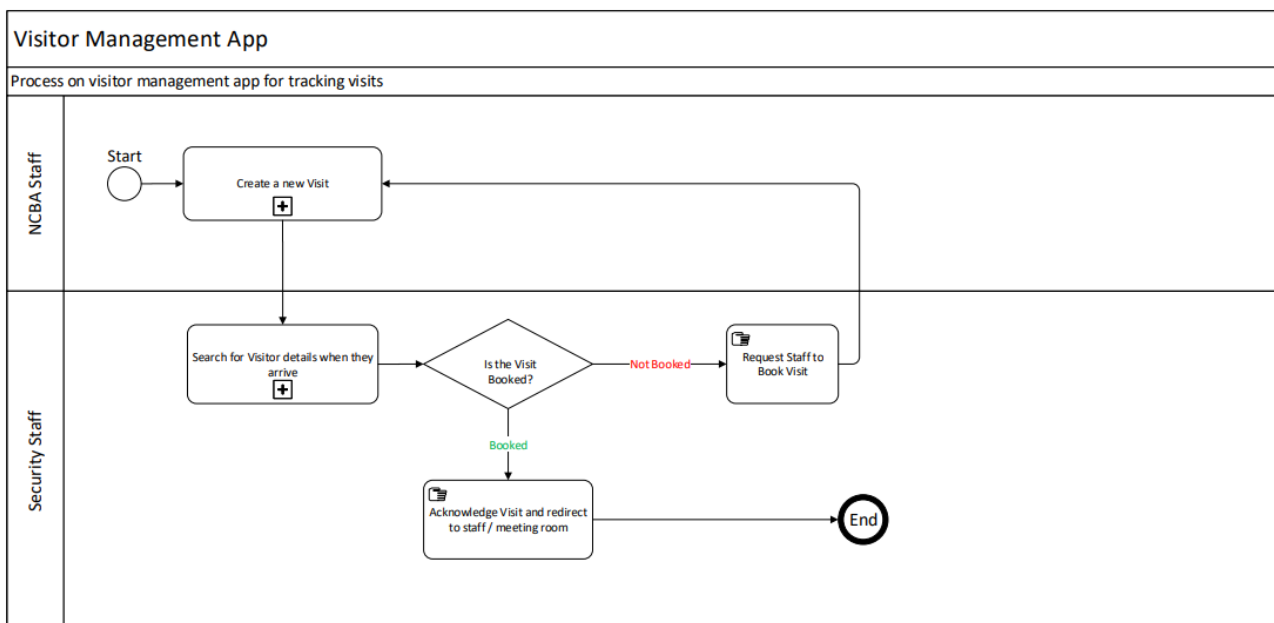

## 5 Process Flows

### 5.1 As Is Process

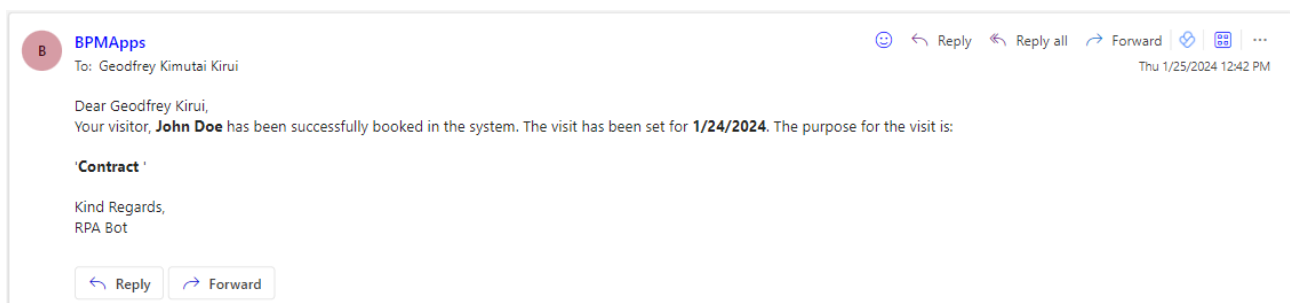

This is a new innovative and transformative application whose as is process is decentralized and manually done using emails and therefore has no approved As-Is process flow.

### 5.2 To-Be Process

The To-Be process for the Visitor Management application is as outlined below.

Sample email to be sent by Powerapp:

# Requirements Definition

---

## 6 Sample Functional Requirements

### 6.1 Types of Users

The users of the system will be:

- a. **Staff users** – These are the staff members who will record upcoming visits.
- b. **Security Staff** – These are the security staff who will acknowledge the visits once the visitor arrives.

### 6.2 Reports

The reports to be generated by the system by admins will be:

- a. **Visitor Report** – This will list out all visitor records on the platform

## 7 Technical Requirements

### 7.1 General Requirements

The Visitor Management App general requirements are:

- a. Have the app run on the web accessed through the browser
- b. Have an uptime / availability of 99%
- c. Use NCBA Microsoft Active directory for Single Sign on

### 7.2 User Interface Requirements

The Visitor Management App user interface requirements are:

- a. Branding using NCBA Artefacts: Logo and theme colours
- b. Have simple / basic tagline and image on the landing page
- c. Ability for users to add visits

### 7.3 Performance Requirements

The Visitor Management App user performance requirements are:

- a. Branding using NCBA Artefacts: Logo and theme colours
- b. Fast load time of the application

### 7.4 Security Requirements

The Visitor Management App service level requirements are based on Microsoft Office 365 agreements.

### 7.5 Service Level Requirements

The Visitor Management App service level requirements are based on Microsoft Office 365 agreements.

### 7.6 Operational Maintenance Requirements

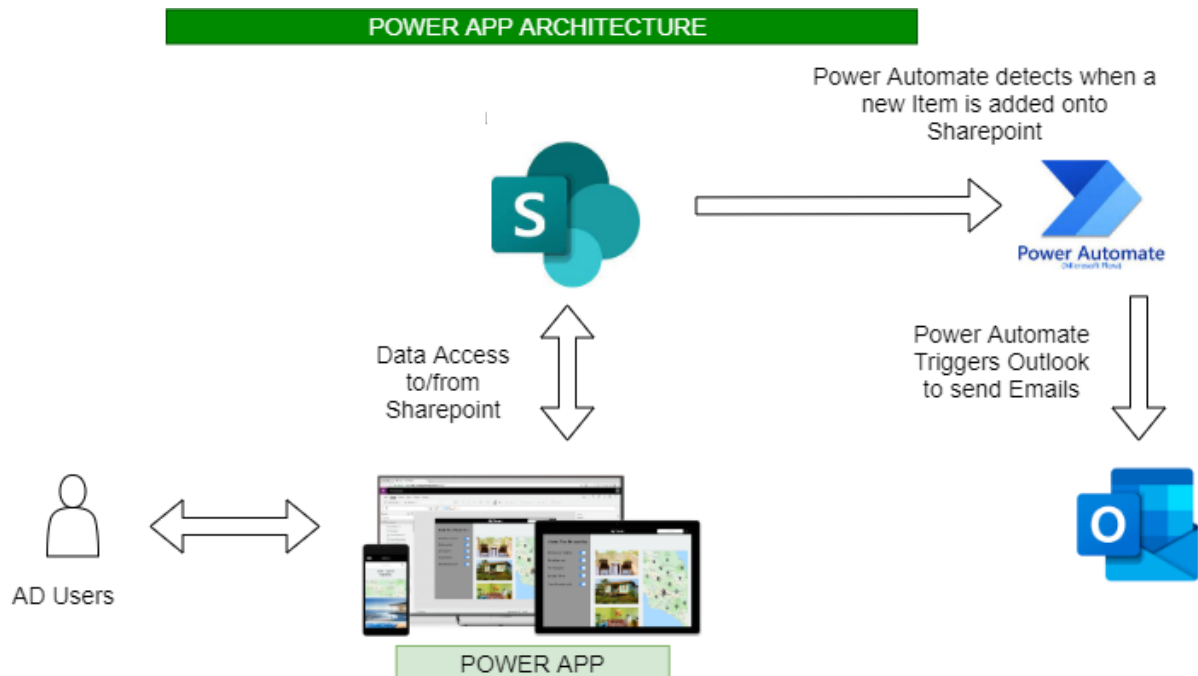

The Visitor Management App will be maintained internally by the Business Process Management and IT Support department of NCBA

# System Specification

---

## 8 System Overview

### 8.1 System Architecture

The system architecture of the application entails:

1. **Clients** – The app users will use browsers on their devices to access the Visitor Management app for recording visits. The client devices will send communication to the powerapps
2. **PowerApps** – This component will be used for processing of data submitted from clients and retrieval of data from SharePoint for a logical view by the clients.
3. **SharePoint** – This will be the data store for the application receiving of data processed by powerapps and retrieval of data for view by the clients

## 9 External Interface Requirements

### 9.1 User Interfaces

The Visitor Management app has no external user interfaces

### 9.2 Hardware Interfaces

The Visitor Management app has no external hardware interfaces

### 9.3 Software Interfaces

The Visitor Management app will be using the following communication interfaces:

- a. NCBA Microsoft active directory

### 9.4 Communication interfaces

The Visitor Management app will be using the following communication interfaces:

- a. NCBA mail server to send out notifications.

## 10 Test Cases

| Test case id | Test case name | Test Case Description | Test steps |                 |        | Test case status<br>(Approved/<br>Disapproved) | Test status<br>(Pass/<br>Fail) | Test priority |
|--------------|----------------|-----------------------|------------|-----------------|--------|------------------------------------------------|--------------------------------|---------------|
|              |                |                       | Step       | Expected Result | Actual |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
|              |                |                       |            |                 |        |                                                |                                |               |
