2. Abbreviations

Abbreviation	Description
HOTO	Handover and Takeover
BPM	Business Process Management
EXCOM	Executive Committee
GD	Group Director
GMD	Group Managing Director
KE	Kenya
SLA	Service Level Agreement
SSO	Single Sign-On

3.0 Background

The Branch Handover and Takeover (HOTO) process ensures the formal transfer of responsibilities, assets, and accountability when staff transition into or out of key branch operational roles. The process currently applies to Branch Operations Assistants, Branch Operations Officers, Assistant Managers, Branch Operations Managers, and Branch Managers, and is executed using manual, paper-based documentation.

3.1 Problem Statement

The current paper-based HOTO process is inefficient, prone to delays, and lacks end-to-end visibility. Manual documentation increases the risk of incomplete records, weak accountability, and audit challenges, highlighting the need for a centralized digital workflow that improves efficiency, compliance, and tracking.

3.2 Next Steps – The Digitalization Initiative

As part of the Bank's Digital at the Core transformation strategy, this initiative proposes the full automation of the HOTO process through a Microsoft Power Apps solution. The solution will deliver:

- Digital checklist forms replacing all paper-based HOTO documents.
- An automated approval workflow routing sign-offs to the correct supervisors.
- Real-time dashboard visibility across all branches.
- Automated email and SMS alerts for pending or overdue handovers.
- Secure digital archival of all completed HOTO records.

3.3 Strategic Alignment – Reduce | Eliminate | Automate (REA)

This initiative directly supports the Bank's REA Transformation Agenda by eliminating paper-based processes, reducing manual coordination overhead, and automating approval workflows end-to-end.

Operational Efficiency	Governance & Compliance	Data Visibility
• Elimination of paper-based HOTO forms • Automated digital workflows and alerts • Faster role transition with fewer errors	• Enforced approval hierarchy for all HOTOs • Digital e-signatures and timestamped audit trails • NCBA HR Policy compliance built into the process	• Real-time Power BI dashboards across all branches • Centralized HOTO status visibility for management • Searchable digital archive of all handover records

3.4 Process Key Contact

This document was developed based on inputs provided by the Process Subject Matter Experts (SMEs) and Process Owner. The Process Owner is expected to review and provide sign-off confirming accuracy, completeness of process steps, context, impact, and the full set of process exceptions.

Role	Name	Notes
Process SME	Lucy Njagi	SME & Author
Process Developer	BPM / IT Support	Power App Development
Process Architect	BPM Team	Documentation & QA
Process Owner	Head of Branch Operations	Sign-off Authority

3.5 Minimum Pre-requisites for Development

- Completed and approved Process Definition Document (PDD).
- Predefined and approved handover checklist templates for each branch role.
- Defined user access levels: Applicant, Approver, Administrator.
- Training plan for system users confirmed and scheduled.
- Test environment available for UAT prior to go-live.

3.6 Applications Used in the AS-IS Process

The following applications are currently used in the As-Is HOTO process:

Application Name	Version	System Language	Environment	Access Method	Comments
Power Apps	Current	EN	Microsoft 365	Web / SSO	HOTO digital forms and approval workflows
SharePoint	Current	EN	Microsoft 365	Web / SSO	Data store and document archival
Microsoft Outlook	n/a	EN	Microsoft 365	Web Portal	Email notifications and alerts
Power BI	Current	EN	Microsoft 365	Web / SSO	Reporting and audit dashboards
NCBA Active Directory	n/a	EN	On-Premises	SSO	User authentication and identity management

4. Process General Overview

4.1 Process Purpose

The Branch Handover and Takeover Process enables branch staff to formally transfer operational responsibilities during role transitions through a centralized, automated digital platform — eliminating reliance on paper-based checklists and manual filing.

#	Item	Description
1	Department Name	Business Process Management / Branch Operations
2	Process Name	Branch Handover and Takeover (HOTO) Process
3	Process Area	Branch Operations – Staff Role Transitions
4	Short Description	Digital process for managing the handover and takeover of branch operational duties between staff members during role transitions
5	Roles Performing Process	Branch Operations Assistant, Branch Operations Officer, Assistant Manager Branch Operations, Branch Operations Manager, Branch Manager
6	Process Schedule	Event-driven – triggered by staff role changes, leave, or role rotation
7	Process Frequency	Ad hoc / event-driven
8	Avg. Handling Time per HOTO	Estimated 2–4 hours (manual); target <30 minutes (digital)
9	Input Data	Staff role details, handover checklist data, e-signatures
10	Output Data	Completed HOTO records, audit trail entries, management reports

4.2 Value Case

The transition from a manual, paper-based HOTO model to a centralized digital ecosystem directly supports the Bank's Reduce | Eliminate | Automate (REA) transformation agenda:

#	Item	Quantitative Benefits	Expected Benefits																																								
1	Faster TAT (Man-Hours Reduction)	Step 1: Probability distribution of HOTO events (866 branch staff) <i>Since exact leave frequency data is unavailable, a weighted probability model is applied:</i><table><tr><th>Leave Instances / Year</th><th>Probability</th><th>Staff</th><th>HOTO Events</th></tr><tr><td>4 instances</td><td>5%</td><td>43</td><td>172</td></tr><tr><td>6 instances</td><td>12%</td><td>104</td><td>624</td></tr><tr><td>8 instances</td><td>28%</td><td>242</td><td>1936</td></tr><tr><td>10 instances</td><td>30%</td><td>260</td><td>2600</td></tr><tr><td>12+ instances</td><td>25%</td><td>217</td><td>2604</td></tr><tr><td>Total / Wtd. Avg. (9.16) = Σ (Instances × Probability)</td><td>100%</td><td>866</td><td>7936</td></tr></table> Step 2: Combined time cost per HOTO event (3 parties)<table><tr><th>Party Involved</th><th>Time Before</th><th>Time after</th><th>Time Saved</th></tr><tr><td>Outgoing staff (completes form)</td><td>120 Min</td><td>30 Min</td><td>90 Min</td></tr><tr><td>Incoming staff (reviews & signs)</td><td>30 min</td><td>10 Min</td><td>20 Min</td></tr></table>	Leave Instances / Year	Probability	Staff	HOTO Events	4 instances	5%	43	172	6 instances	12%	104	624	8 instances	28%	242	1936	10 instances	30%	260	2600	12+ instances	25%	217	2604	Total / Wtd. Avg. (9.16) = Σ (Instances × Probability)	100%	866	7936	Party Involved	Time Before	Time after	Time Saved	Outgoing staff (completes form)	120 Min	30 Min	90 Min	Incoming staff (reviews & signs)	30 min	10 Min	20 Min	- Digital HOTO reduces combined event time from 3 hrs to 45 min, saving 2 hrs 15 min per event 75% reduction in combined processing time per HOTO event Weighted Average Base Case: 17,856 hours lost to manual HOTO per year <i>equivalent to 8.55 full-time staff doing nothing but HOTO paperwork annually</i> - Significant reduction in manual follow-up, scanning, emailing, and filing
Leave Instances / Year	Probability	Staff	HOTO Events																																								
4 instances	5%	43	172																																								
6 instances	12%	104	624																																								
8 instances	28%	242	1936																																								
10 instances	30%	260	2600																																								
12+ instances	25%	217	2604																																								
Total / Wtd. Avg. (9.16) = Σ (Instances × Probability)	100%	866	7936																																								
Party Involved	Time Before	Time after	Time Saved																																								
Outgoing staff (completes form)	120 Min	30 Min	90 Min																																								
Incoming staff (reviews & signs)	30 min	10 Min	20 Min																																								

		<table><tr><td>Approving supervisor (reviews & signs)</td><td>30 min</td><td>5 Min</td><td>25 Min</td></tr><tr><td>Total combined time per HOTO</td><td>3 hrs</td><td>45 Min</td><td>2 Hrs 15 Min</td></tr></table> Step 3: Annual man-hour savings — three scenarios <table><tr><th>Scenario</th><th>Avg. Instances</th><th>HOTO Events</th><th>Before (Hrs)</th><th>After (Hrs)</th><th>Net Saving</th></tr><tr><td>Base Case(Wtd Avg)</td><td>9.16</td><td>7936</td><td>23,808</td><td>5,952</td><td>17,856</td></tr></table> Base Case Net Saving: 7936 events × (3 hrs – 45 min) = 17,856 hrs reclaimed per year	Approving supervisor (reviews & signs)	30 min	5 Min	25 Min	Total combined time per HOTO	3 hrs	45 Min	2 Hrs 15 Min	Scenario	Avg. Instances	HOTO Events	Before (Hrs)	After (Hrs)	Net Saving	Base Case(Wtd Avg)	9.16	7936	23,808	5,952	17,856	
Approving supervisor (reviews & signs)	30 min	5 Min	25 Min																				
Total combined time per HOTO	3 hrs	45 Min	2 Hrs 15 Min																				
Scenario	Avg. Instances	HOTO Events	Before (Hrs)	After (Hrs)	Net Saving																		
Base Case(Wtd Avg)	9.16	7936	23,808	5,952	17,856																		
2	Paper & Printing Cost	Annual paper & printing cost breakdown: <table><tr><th>Cost Element</th><th>Amount (KES)</th></tr><tr><td>HOTO requests per year</td><td>7936</td></tr><tr><td>Pages per HOTO form</td><td>2 pages</td></tr><tr><td>Cost per page (printing)</td><td>KES 5</td></tr><tr><td>Total annual paper cost</td><td>KES 79,360</td></tr></table> Total Annual Paper Cost = KES 79,360	Cost Element	Amount (KES)	HOTO requests per year	7936	Pages per HOTO form	2 pages	Cost per page (printing)	KES 5	Total annual paper cost	KES 79,360	• 100% elimination of paper-based HOTO forms across all branches • KES 79,360 in annual paper and printing cost savings • Reduced storage and archival overhead for physical files										
Cost Element	Amount (KES)																						
HOTO requests per year	7936																						
Pages per HOTO form	2 pages																						
Cost per page (printing)	KES 5																						
Total annual paper cost	KES 79,360																						

#	Item	Qualitative Baseline(Before Implementation)	Expected Benefits
3	Governance & Approval Control	- Approval workflows inconsistently applied across branches - Physical documents can be lost, altered, or misfiled - Supervisors are not always notified promptly of pending HOTOs - No e-signature capability — wet signatures only	100% enforced digital approval routing for every HOTO - Automated supervisor notifications at each workflow stage - Complete e-signature capture for all parties - Immutable audit trail for every transaction
4	Data Visibility & Reporting	- No centralized view of HOTO status across branches - Management must consolidate data manually via email and paper files - Limited visibility into overdue or incomplete handovers	- Real-time Power BI dashboard with 100% HOTO visibility - Centralized data repository via SharePoint integration - Instant access to historical records, status filters, and compliance reports
5	Risk & Compliance	- Risk of incomplete handovers and missed responsibilities - No audit evidence for regulatory or HR reviews - Unverified role transitions create operational risk	- Mandatory digital checklists ensure all responsibilities are formally acknowledged - Timestamped records provide robust audit evidence 100% NCBA HR Policy compliance enforced by system controls

4.3 Success Measures / Key Performance Indicators

The success of the HOTO digitalization initiative should be evaluated based on adoption, compliance, and efficiency metrics:

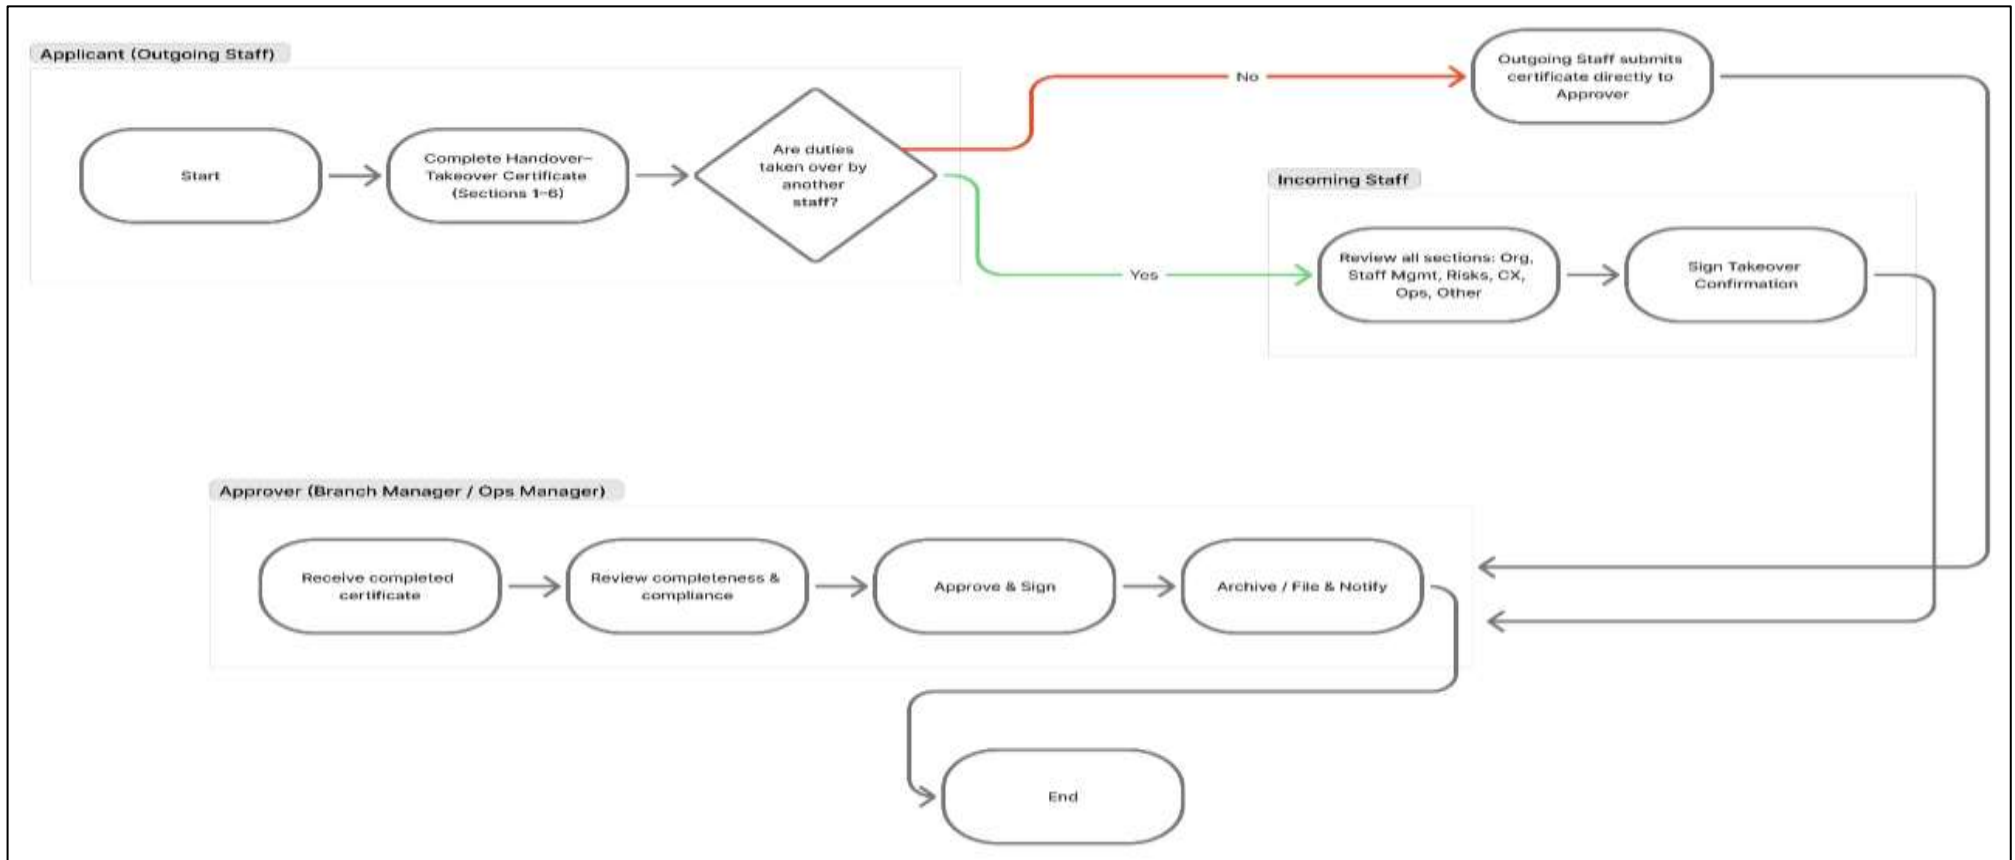

#	KPI	Target	Comment
1	Process Adoption Rate	95% Yr 1 100% Yr 2	Full migration from paper-based HOTO to the digital system across all branches.
2	HOTO Completion Time	45 minutes per HOTO	Average time from initiation to final approval on the digital platform.
3	Audit Trail Completeness	100%	All HOTO transactions must be fully captured in the system with e-signatures.
4	System Availability	99.99% uptime	Based on Microsoft Office 365 SLA commitments.
5	Overdue HOTO Alert Rate	<5% of all HOTOs	HOTOs not completed within the defined SLA period, tracked via dashboard.

4.4 Process Scope

In / Out of Scope	Scope Description
In Scope	- Automation of paper-based HOTO checklists for branch staff roles - Digital approval workflows for incoming and outgoing staff and supervisors - E-signature capture and digital archival of all HOTO records - Automated email/SMS alerts for pending and overdue handovers - Real-time centralized dashboard and Power BI reporting - Roles: Branch Operations Assistant, Branch Operations Officer, AMBO, Branch Operations Manager, Branch Manager
Out of Scope	- HOTO processes for Branch Relationship Managers (RMs) - Head office and back-office staff transitions - HR payroll or contract management processes

5. AS-IS Process Overview

The current HOTO process is largely manual and paper-based. Staff complete physical checklists and sign-off documents which are then scanned and submitted via email to branch management. There is no centralized tracking, real-time visibility, or automated follow-up for pending or overdue handovers. The steps below describe the current state:

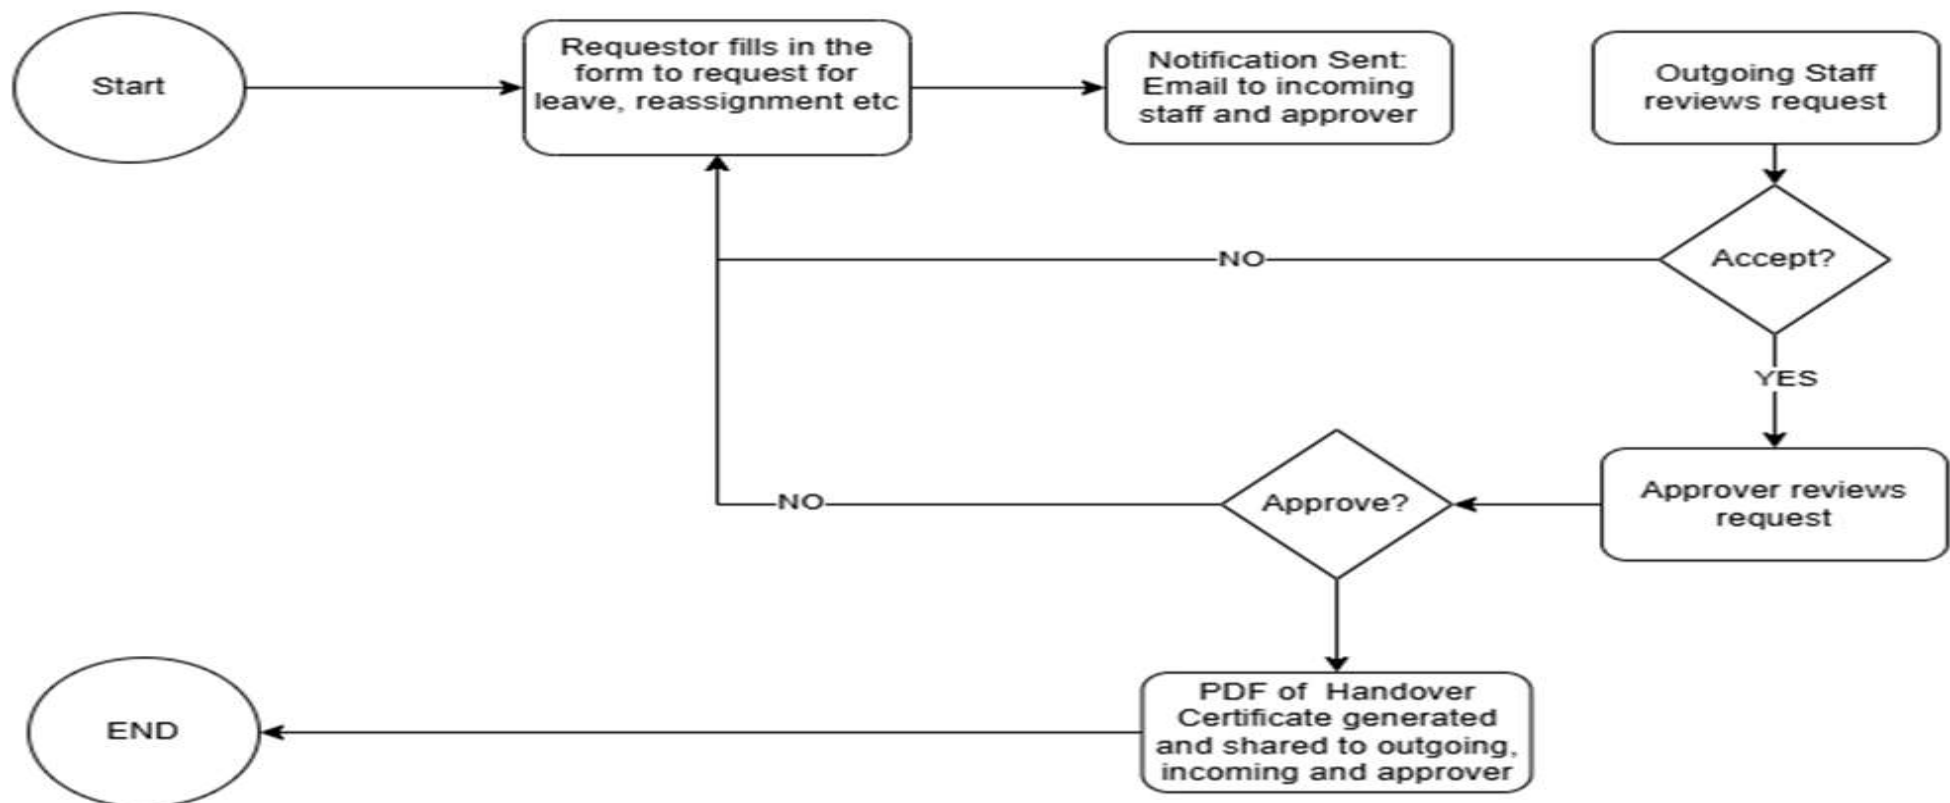

#	Step	Description of Key Process Steps
1	Staff Role Change Identified	A staff member is identified as transitioning into or out of a branch operational role (promotion, transfer, leave, or exit).
2	Physical Checklist Obtained	The outgoing staff member or HR/Branch Manager obtains the appropriate paper HOTO checklist for the specific role being vacated.
3	Outgoing Staff Completes Checklist	The outgoing staff member manually fills in all sections of the paper checklist, documenting the status of responsibilities, pending tasks, and assets.
4	Checklist Reviewed by Incoming Staff	The incoming staff member reviews the completed checklist to acknowledge and accept responsibility for each item.
5	Both Parties Sign Off	Both the outgoing and incoming staff members physically sign the checklist to confirm the handover. Where no incoming staff exists, only the outgoing staff signs.
6	Supervisor Review and Sign-Off	The Branch Leave Approver (supervisor) reviews and physically signs the checklist to authorize the handover.
7	Document Scanned and Filed	The completed and signed checklist is scanned and emailed to the Branch Manager and/or HR, then physically filed in the branch records.
8	No Centralized Tracking	There is no system to centrally track HOTO status across branches. Management must manually follow up via email to confirm completions.

6. TO-BE Process Overview

6.1 Process Diagram

The TO-BE process replaces all paper-based HOTO activities with a fully digital workflow on Microsoft Power Apps. The diagram below (to be maintained in Figma/Process Map) illustrates the end-to-end automated flow. Please refer to the attached process map for the visual representation.

6.2 TO-BE Process Steps

The table below provides a description of each step in the TO-BE HOTO Process Map:

#	Step	Description of Key Process Steps
1	Login to HOTO Power App	The outgoing staff member logs into the HOTO Power App via the bank's intranet using their NCBA Active Directory (SSO) credentials.
2	Create New HOTO Request	The outgoing staff member selects their role from the predefined list and initiates a new HOTO request. The system loads the role-specific digital checklist automatically.
3	Complete Digital HOTO Checklist	The outgoing staff member completes all required fields in the digital checklist, including responsibilities, pending tasks, asset status, and any required attachments.
4	System Checks: Incoming Staff or Not?	The system determines whether duties are being handed over to a specific incoming staff member or being absorbed by the supervisor. • If incoming staff exists: route to incoming staff for review. • If no incoming staff: route directly to the Branch Leave Approver.
5	Incoming Staff Review (Where Applicable)	The incoming staff member reviews the completed checklist within the Power App, acknowledges each item, and applies their digital e-signature to confirm acceptance.
6	Branch Leave Approver Review & Sign-Off	The Branch Leave Approver (supervisor) reviews the completed checklist and e-signatures. The approver approves, returns for clarification, or declines the HOTO request within the system.
7	Automated Notifications	The system sends automated email notifications at each stage: to the incoming staff to complete their review, to the approver when ready for sign-off, and to all parties upon final completion or rejection.
8	HOTO Record Finalized & Archived	Upon final approval, the system generates a timestamped, digitally signed HOTO summary document. The record is automatically archived in SharePoint and becomes searchable by authorized users.
9	Dashboard Updated in Real-Time	The centralized Power BI dashboard is updated to reflect the completed HOTO. Management can view HOTO status across all branches in real-time.

6.3 Input and Output Data

Input/Output	Data Name	System	Data Validation
Input	- Staff role and HOTO type - Digital checklist responses - E-signatures (outgoing, incoming, approver) - Attachments (where required)	Power Apps / SharePoint	Yes – mandatory fields enforced by system
Output	- Completed HOTO digital record - Timestamped audit trail - Management dashboard updates - Email notifications to stakeholders	Power BI, Power Apps, SharePoint, Outlook	Yes – automatically generated upon approval

7. Functional Requirements

7.1 Types of Users

User Type	Description
Applicant (Outgoing Staff)	Branch staff transitioning out of a role. Initiates the HOTO request and completes the digital checklist.
Incoming Staff	Staff taking over the role. Reviews the checklist and provides e-signature acceptance.
Branch Leave Approver	Supervisor responsible for authorizing the HOTO. Reviews all sections and provides final digital sign-off.
EXCOM / Senior Management	Executive Committee members whose HOTOs follow an elevated approval path via the Group Director or GMD.
System Administrator	BPM / IT Support team responsible for managing the application, user access, and configuration.

7.2 Core System Features

The HOTO Power App shall deliver the following functional capabilities:

Feature	Description
Digital Checklists	Predefined, role-specific forms with required fields tailored to each branch operational role. Forms are loaded automatically based on the selected role type.
Attachments	In specific scenarios (e.g., asset discrepancies), the system supports document attachments as evidence during the HOTO process.
E-Signatures & Approvals	Secure digital sign-off capability for outgoing staff, incoming staff, and approving supervisors. Signatures are timestamped and embedded in the final HOTO record.
Automated Alerts	Email and SMS notifications triggered at each workflow stage: initiation, pending review, overdue actions, and final completion or rejection.
Date Stamp	Automatic capture of the HOTO start date and end date for every transaction, providing a clear record of the transition period.
Centralized Dashboard	Real-time Power BI dashboard providing management visibility of HOTO status across all branches — filterable by branch, role type, and status.
Audit Trail	Timestamped, immutable log of all actions taken within the system (submissions, reviews, approvals, rejections, edits).
Data Archive	Secure, searchable digital storage of all completed HOTO records in SharePoint, accessible to authorized users for retrieval and audit purposes.

7.3 Workflow Logic

The HOTO document will follow the approval routing logic below:

- Outgoing Staff → Incoming Staff → Branch Leave Approver (where duties are taken over by another staff member).
- Outgoing Staff → Branch Leave Approver (where no incoming staff is taking over the duties).
- E-signatures are appended to the output checklist by each approver in sequence.

7.4 Non-Functional Requirements

Category	Requirement
System Access	The Power App shall be accessible via browser on the bank's network environment using NCBA Microsoft Active Directory SSO.
Availability	The Power App shall achieve 99.99% service availability in line with Microsoft Office 365 SLA commitments.
Usability	The interface shall be intuitive, user-friendly, and require minimal training. The design should minimize the number of steps to complete a HOTO.
User Scalability	The system shall be scalable to accommodate new branch roles, additional checklist types, and growing transaction volumes without performance degradation.
Security	All data shall be encrypted in transit and at rest. Access control shall be role-based, ensuring users can only view and act on HOTOs relevant to their role.

8. Business Exceptions Handling

The table below documents how the HOTO system will handle process exceptions identified during analysis. Each exception has a defined action to ensure process integrity and audit completeness are maintained.

ID	Exception Name	Where It Occurs	Action to Be Executed
1	Incoming Staff Declines HOTO	Review stage (incoming staff)	System notifies outgoing staff and approver. Checklist is returned for amendment. Decline reason is recorded in audit trail.
2	Approver Returns HOTO for Clarification	Approval stage	System notifies outgoing staff with approver comments. HOTO remains editable. Audit trail entry is created.
3	Approver Rejects HOTO	Approval stage	HOTO is closed. Rejection reason is stored. Email notification sent to all parties. Decision recorded in approvals log.
4	HOTO Not Completed Within SLA	Any stage (overdue)	System sends escalation alert to the Branch Manager and BPM team. Dashboard flags the overdue HOTO in red.

5	Required Attachment Missing	Checklist submission	System blocks submission until mandatory attachments are uploaded. Validation error message displayed to user.
6	Staff Exits Before HOTO Completion	Any stage	Approver may complete and authorize the HOTO unilaterally. BPM is notified. Record is flagged for review.

9. Assumptions, Dependencies & Risks

9.1 Assumptions

- System performance across all geographic branch locations will be within defined acceptable tolerances.
- A test environment will be available for UAT prior to production deployment.
- Business units have a clear understanding of their system expectations and checklist requirements.
- Branch staff will have access to devices and internet connectivity sufficient for using the Power App.

9.2 Dependencies

- Existence of predefined and approved handover checklist templates for each branch role.
- Availability of NCBA Microsoft Active Directory for SSO integration.
- User training plan confirmed and scheduled prior to go-live.
- Documentation quality and procedure enforcement by Branch Operations management.

9.3 Risks

#	Risk	Category	Mitigation
1	Scope creep beyond defined branch roles	Scope	Maintain a formal change control process. Any out-of-scope additions require BPM approval.
2	Resource competition with other active projects	Resource	Agree resource allocation with BPM leadership. Set clear project timeline milestones.
3	Low user adoption among branch staff	People	Conduct user training and change management sessions. Appoint branch champions.

4	Unclear or incomplete checklist requirements	Quality	Obtain validated, approved checklist templates from Branch Operations before development begins.
5	System unavailability during critical HOTO periods	Technical	Align with Microsoft O365 SLA. Maintain fallback paper process during planned maintenance.

10. Technical Requirements

10.1 General Technical Requirements

- Microsoft suite products to be used exclusively (Power Apps, SharePoint, Power BI, Outlook).
- User-friendly interface for form submission, approval, and report retrieval.
- NCBA Microsoft Active Directory for Single Sign-On (SSO) authentication.
- NCBA branding: logo, theme colours applied to all application screens.
- Users must be able to view submission history, save drafts, and check submission status.

10.2 Technical Specifications

Component	Detail
Platform	Microsoft Power Apps (browser-based, no install required)
Data Store	Microsoft SharePoint – primary data repository for HOTO records and attachments
Authentication	NCBA Microsoft Active Directory – Single Sign-On (SSO) for all users
Notifications	Microsoft Outlook / NCBA Mail Server – email and SMS alerts
Reporting	Microsoft Power BI – real-time dashboards and audit reporting
Branding	NCBA logo, theme colours, and design artefacts applied to all UI screens
Maintenance	Maintained internally by BPM and IT Support department
SLA Reference	Microsoft Office 365 SLA – 99.99% uptime commitment

10.3 System Architecture

The system architecture for the HOTO Power App is structured as follows:

System Component	Role in Architecture
User (Browser / Device)	Branch staff access the HOTO Power App via a web browser on any bank-connected device.
Power Apps	Hosts the digital HOTO forms, enforces workflow routing logic, and manages approval state.
SharePoint	Acts as the data store — receives processed HOTO data from Power Apps and stores completed records for retrieval.
Microsoft Outlook	Delivers automated email notifications to users at each workflow stage.
Power BI	Connects to SharePoint data to render real-time management dashboards and audit reports.
Active Directory	Provides user identity, authentication, and role-based access control across the system.

11. Reporting Requirements

This section outlines the reporting, monitoring, and analytics requirements for the HOTO Power App. The platform will support operational reporting, compliance governance, and management visibility through an integrated Power BI layer.

#	Report Type	Frequency	Details	Audience	Monitoring Tool
1	HOTO Status Tracker	Real-Time	All active HOTOs by status (Pending, In Review, Approved, Rejected) — filterable by branch and role	Branch Managers, BPM	Power App Dashboard
2	Pending Approvals Summary	Real-Time	HOTOs awaiting action per approver; average turnaround time per approval stage	Branch Leave Approvers, BPM	Power App Admin View
3	Overdue HOTO Report	Daily	HOTOs not completed within the defined SLA. Flagged by branch and escalation level.	Branch Managers, BPM, HR	Power App Admin View
4	HOTO Activity by Branch	Weekly	Volume of HOTOs per branch, breakdown by role type and completion outcome	Branch Operations, Head Office	Power App Admin View
5	Executive HOTO KPI Dashboard	Real-Time	Total HOTOs initiated, completed, and pending. Compliance rate, SLA adherence, and overdue count	Branch Director, BPM Head, EXCOM	Power BI
6	Audit Trail Report	On Demand	Timestamped log of all actions per HOTO transaction — for compliance and regulatory review	Internal Audit, BPM, HR	SharePoint / Power BI
